

The following requirements must be met by all projects:

1. There must be a form of help within the system
2. The system must have a pdf document which acts as a user guide for the system
3. The system must have a 45 second Flash intro which includes the team logo, team members (inc. contact info), and class information
4. The system must have a form of feedback and evaluation
5. The system must detail the security measures (at least eight components) at a domestic airport.
6. The system must detail the security measures (at least three components) at a foreign airport.
7. The system must have a web map detailing the usability principle of: "Telling the user where they are, where they've been, and where they can go."
8. The system must incorporate sound on at least 2 pages.
9. The system must include an overview of how metal detectors work.
10. The system must include an overview of at least one airport incident that could have been avoided if proper security measures were in place.
